Art Unit: 1625

The restriction requirement is made final for the reasons of record.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-8 and 11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. "P" in formula 2 is undefined.

The following minor errors in the specification must be corrected:

P. 21, line 28 "2,3" should be - - 2,2 - -.

P. 23, line 10 "2',3'-dimethoxyacetate" should be 2',4'-dimethoxyphenylacetate.

P. 22, line 20 benzoyl should be benzyl.

P. 18, line 7 "5-benzoyloxy" should be - - 5-hydroxy - -.

The instant process is considered a non-obvious variation of the process of Versteeg et al, of record. Note the use of the instant 2-oxybenzaldehyde in the instant coupling step in contrast to the 2-oxybenzylbromide in the coupling step of the reference.

Further note that since the reference uses the 2-oxybenzaldehyde as starting material to prepare the 2-oxybenzylbromide in 2 steps that the instant process is shorter.

The reference was supplied to applicants with the restriction requirement to support it. However since the pages of the reference were incorrectly cited in the PTO-892 form it is being cited again on a new PTO-892 form on which another reference Pinard et al is also cited to show the state of the art. It uses an unprotected 2-hydroxy

benzaldehyde in the condensation with the substituted phenyl acetic acid ester. Thus the coumarin (i.e. a lactone) is formed . See pages 2739 and 2740.
